## Michael A. Evans Center for Health Sciences, Marian University

### Vanceva® creates colorful beacon to school

First impressions are everything, and Marian University's new colored glass "lantern" building makes a welcoming statement that won't be easily missed. The new Michael A. Evans Center for Health Sciences is home to the university's top-tier Osteopathic Medical School and its highly respected School of Nursing. Situated on a primary intersection in Indianapolis, Indiana (U.S.A.), the building beckons students, faculty, and the public into the campus with its unique and contemporary expression of stained glass.

Using Catholic iconography, blocks of violet, blue, yellow, and orange, Vanceva® glass randomly forms the surrounding background for the San Damiano Cross, which is set with clear glass. During the day, sunlight streams into the space, bringing color and vibrancy to the interiors. By night, the building's internal illumination allows the colored glazing to glow with vivid colors.

### About Vanceva®

Producing a broad spectrum of colors and moods that are unachievable using stock selections of glass, Vanceva color by Eastman gives architects and designers more creative freedom with glass than ever before. Vanceva color interlayers can be combined to produce more than 2,000 transparent, translucent, or opaque color options to help create the desired tone and intensity. When Vanceva color interlayers are combined with tinted or reflective glass, the design possibilities are nearly limitless. No other interlayer brand delivers the complete spectrum of colors for laminated glass like Vanceva colors.
