Yabany Restaurant

A Taste of Japan Illuminates the Heart of São Paulo

Mixing glass and steel with wood and natural fibers, Architect Brunete Fraccaroli created an unusual Japanese restaurant in the heart of São Paulo. The main concern of the client was to not lose the oriental style, while achieving a unique and original space.

The concept is based mainly on the use of bold and warm colors simultaneously, with a focus on orange and pink. The play between these two attractive colors, combined with the transparency of glass generates a spacious, contemporary and clean environment, without departing from the tradition of Japanese cuisine.

The result is a broad environment where social life appears as a factor of attraction, creating a uniqueness to the project. Color and light are the strengths of the project, also in the use of glasses, which would not give the same effect to all if they were used merely transparent.

While Brunete Fraccaroli makes use of many materials in her projects, her favorite material is Vanceva® colored laminated glass. "Right now Solutia's products represent a great solution," said Fraccaroli. "Glass is a material with many functions. We can use to separate the environments, without losing the interactivity and gaining in space. It is a lightweight material, noble and has characteristics of modernity."

All of the windows in the project were made using Vanceva color interlayer for laminated glass, as well as the partitions and balcony railing. The lighting fixtures were custom designed for the project by the architect. To create a cosmopolitan atmosphere, the use of pink and orange in translucent glass, produced an unusual effect of dynamic illumination.

About Vanceva®

Producing a broad spectrum of colors and moods that are unachievable using stock selections of glass, Vanceva color by Saflex gives architects and designers more creative freedom with glass than ever before. Vanceva color interlayers can be combined to produce more than two thousand transparent, translucent, or opaque color options to help create the desired tone and intensity. When Vanceva color interlayers are combined with tinted or reflective glass, the design possibilities are nearly limitless. No other interlayer brand delivers the complete spectrum of colors for laminated glass like Vanceva colors by Saflex. Used in curtain walls, atriums, skylights, partitions and conference rooms, Vanceva color interlayers allow the most expressive designs with distinctive hues from the subtle to the dramatic, all using the advanced interlayer technology you have come to know and trust in the Saflex brand.
