Kvadrat Headquarters

Light and Colored Glass Join Forces to Create Airy, Vibrant Space

As sunshine pours in from the windows on a sunny day in Hackney, London, the airy spaces of the Kvadrat Headquarters are filled with a dazzling colored light. The use of laminated glass panels in every color of the spectrum has transformed the Victorian “cavernous” spaces of the office into a spectacular display of light and color that changes every hour with the movement of the sun. This choice of color in the architecture is appropriate to Kvadrat, as the textile company is well-known for its refreshing and imaginative use of color in its creations.

The design concept was developed by architect David Adjaye and graphic designer and art director Peter Savile. Their idea for the building was to alter the space in a subtle and understated way using delicate and un-obtrusive laminated glass panels. Installation of the panels proved to be a difficult undertaking, but had gratifying results. Both visitors and employees of the Kvadrat Headquarters frequently show surprise that the impact of natural light and the play of light and shadow could produce such a powerful and beautiful effect. Jury member Shashi Caan commented that the building was “a strong statement made with few notes and careful editing. I like the clarity of this project.” The strong, clear aesthetics of the work were one of the main reasons the jury chose this project to receive the Honorable Mention Award in the Solutia 2010 World of Color Awards™ inspired by Vanceva®.

The warmth and vibrancy of color is not the only effect at work here, however. The play of light and shadow was also a fundamental concept of the design, as the spectrum of colored panels fall between the two extremes of black and white. Architect David Adjaye noted that, “The finished space has a dynamic interaction with the environment around it,” and indeed, the continual effects of light, color, and shade on the building’s spaces are nothing short of astounding.

About Vanceva®

Producing a broad spectrum of colors and moods that are unachievable using stock selections of glass, Vanceva color by Saflex gives architects and designers more creative freedom with glass than ever before. Vanceva color interlayers can be combined to produce more than two thousand transparent, translucent, or opaque color options to help create the desired tone and intensity. When Vanceva color interlayers are combined with tinted or reflective glass, the design possibilities are nearly limitless. No other interlayer brand delivers the complete spectrum of colors for laminated glass like Vanceva colors by Saflex. Used in curtain walls, atriums, skylights, partitions and conference rooms, Vanceva color interlayers allow the most expressive designs with distinctive hues from the subtle to the dramatic, all using the advanced interlayer technology you have come to know and trust in the Saflex brand.
